Problem Set 5
CPSC 689 Randomized Algorithms
Andreas Klappenecker

The assignment is due Monday, April 5, before class.

Problem 1. Write short summaries 5 papers related to your final project (for teams, this should be done individually and overlap should be minimized).

Problem 2. Give a short description of your progress towards the final project (about 10 lines is enough). In particular, you should refine (and possibly modify) your project topic.

Problem 3. Exercise 6.16 in our textbook.

Please typeset your solution in \LaTeX or write very neatly!
